The Table Tops

Everything about Partially Bonded Restorations

5th STATE CDE Programme

21 April
Sunday 2024
PGS Vedanta, Kochi

09:00 AM - 01:00 PM
LECTURE

01.45 PM - 03.30 PM
HANDS ON

Faculty

Dr Moez I Khakiani, MDS

Partial Bonded Restorations... a new era!

Until recently, the only way to restore weakened teeth was through full coverage restorations or crowns. Although this protocol has served many patients for decades, the very thought of cutting enamel to gain retention and resistance form does not seem right. Fortunately, we clinicians live in the era of 'predictable enamel bonding' that eliminates the need for mass enamel murder.

Taking very tissue-preserving adhesive bonded

restoration protocol to posterior teeth, partial bonded restorations like inlays, onlays, vonlays/vtops, overlays, crownlays, endocrowns, etc. have been practiced with immense success across the globe. The main advantage of this approach is its minimally invasive nature that aims at retaining the enamel bio-rim thereby allowing the tooth to retain its core strength, protocol famously referred to as 'Table Top Dentistry'.

So come join us with this innovative and exciting dimension of bonded restorations via a didactic lecture, demonstration and hands-on activity.
